Summary

AI and Machine Learning Engineer with experience in developing, training, and deploying scalable machine learning systems. Strong foundation in statistical modeling, supervised and unsupervised learning, and deep learning. Skilled in building end-to-end ML workflows, model evaluation, optimization, and integration into production environments. Focused on creating reliable, efficient, and maintainable AI solutions that deliver measurable impact.

Education

Institute of Management Sciences — Peshawar, KP
Bachelor of Data Science — CGPA: 3.10 — *Sep 2021 – Jun 2025*

Experience

AI/ML Intern — Sep 2025 – Present
K2X Tech — *Peshawar, PK*

- Designed and implemented end-to-end data pipelines by extracting data from APIs, applying data cleaning and preprocessing functions, and storing structured data in relational databases.
- Worked extensively with PostgreSQL for database management, data cleaning, optimization, and structured querying.
- Developed an audio advertisement detection system to identify ad segments and extract precise timestamps from audio streams.
- Built and deployed LLM-powered applications using Ollama for local inference across multiple NLP tasks.
- Developed Python-based automation scripts and backend workflows for production-grade AI systems.
- **Technologies:** Python, PostgreSQL, Ollama, LangChain, REST APIs, Flask, AWS

AI/ML Intern — Jul 2025 – Aug 2025
Resolve (NSTP) — *Islamabad, PK*

- Built SQL-based Question Answering systems using LLMs for structured databases.
- Designed LangChain-based multi-step SQL agents.
- **Technologies:** Python, LangChain, MySQL, Flask.

AI/ML Intern — Sep 2024 – Oct 2024
Bave Technologies — *Peshawar, KP*

- Built robust web scraping pipelines using Selenium, Requests, and BeautifulSoup.
- Automated data collection workflows and stored cleaned data into CSV files.

Projects

AI Call Agent for Shopping Mall Information Retrieval (Final Year Project)

- Designed and developed an AI-powered voice-based call agent for automated shopping mall information retrieval.
- Implemented agentic AI workflows using LangChain to interpret user queries and dynamically decide actions.
- Integrated speech-to-text and text-to-speech APIs to enable real-time conversational interaction.
- Connected the agent with structured databases (MySQL) to fetch shop details, timings, categories, and services.
- Built the system in Python with API integrations, prompt engineering, and modular architecture for scalability.

AI Job Application & Job Aggregation System

- Developed an AI-powered job aggregation system to collect job postings from LinkedIn, Glassdoor, and Indeed.
- Automated data extraction and ingestion pipelines to gather job titles, companies, locations, skills, and requirements.
- Cleaned, standardized, and deduplicated job listings using Python for consistent analysis and matching.
- Structured and stored processed job data for downstream analysis and intelligent job filtering.

Multimodal Retrieval-Augmented Generation (RAG) System

- Designed and implemented a multimodal RAG system to retrieve and generate answers from text and document-based data.
- Built vector-based retrieval pipelines using embeddings and similarity search for context-aware responses.
- Integrated large language models with retrieved context to generate accurate and grounded answers.
- Processed and indexed unstructured data using Python, enabling scalable knowledge retrieval.

Technical Skills

Programming & Libraries:	Pytorch, Python, SQL, Pandas, NumPy, Scikit-learn
Web & Automation:	Selenium, Playwright, BeautifulSoup, Requests, ScrapingDog, ScrapingBee, REST APIs, Browser Automation, Data Pipelines
Frameworks & Tools:	Flask, Git, Docker, Jupyter, VS Code, PyCharm, Power BI, Excel
Visualization:	Matplotlib, Seaborn, Plotly
AI/ML Tools:	OpenAI GPT-4, Hugging Face, LangChain, Faster-Whisper, n8n, Zapier
Databases:	MySQL, PostgreSQL

Certificates

IBM AI Engineering 2024 – 2025
Coursera

Applied Data Science Lab 2023 – 2024
WorldQuant University

The Complete Python Developer 2022 – 2023
Udemy
